

SAPPHIRE VEIL

EVIDENCE, CITED — NEVER INVENTED.

The identity system for a clinical retrieval tool that shows its sources instead of asking for trust. This book codifies the mark, palette, type, and interface grammar already running in production, and the writing rules that keep the system honest under a disclaimer.

DOC NG-VEIL-01 REV 1.0 · 2026 SCOPE Adrenal insufficiency RAG, NICE NG243

1.000

§0.0 · BRAND IDENTITY

"Sapphire VEIL pairs an engraved display face with a humanist UI sans, over a navy-to-ice palette, expressed as a soft-extruded surface system — so a clinician's eye rests on the evidence, not the chrome."

SOURCE · This document · p.1 · self-attested

1

PLATE 1

MARK

The mark is two overlapping lenses — the "veil" — resolving to a single fixed point. It reads as two independent sources of evidence converging on one grounded answer, which is the entire premise of the retrieval pipeline underneath it.

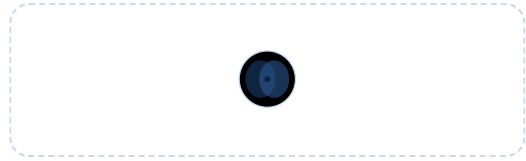

1.1 Primary lockup

SAPPHIRE
VEIL

Cinzel 600, tracking +0.08em. Mark sits left of the wordmark at a fixed ratio of 1:0.82 (mark-height : cap-height).

1.2 Clear space & minimum size

Clear space on all sides equals the radius of the mark's outer ring. Never render the mark smaller than 20px — the centre point must stay resolvable.

1.3 Ratings — usage floor

DO • 1.00

Render the mark on `var(--surface)` or `var(--ground)` only, at full opacity, with both lenses intact.

CAUTION • 0.6

Single-colour reduction (favicons, embossing) is acceptable if the centre point remains a visible gap between the two lenses.

BELOW FLOOR •
0.1

Never recolour the lenses to anything outside the sapphire family, add a drop shadow, or rotate the mark off its fixed axis.

2

PLATE 2

PALETTE

Four hues carry the entire system — a navy ground, an ice ink, and two sapphire steps between them. Amber is held apart, reserved for one job: flagging a source that needs a second look.

Midnight Navy

#0D2440

ground / dark

Default canvas. Never used for text.

Royal Sapphire

#2E5E99

accent

Primary actions, score gauges, active states.

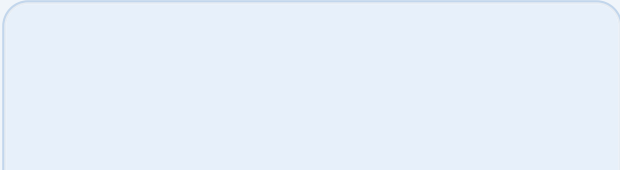

Steel Sky

#7BA4D0

accent-bright

Glows, links, dark-mode highlight ink.

Pale Ice

#E7F0FA

ink / dark

Body text on navy; light-mode surfaces.

Accent Deep

#1c4273

accent-deep

Gradient floor for primary buttons; pressed states.

Caution Amber

#F59E0B

semantic only

Flags a non-current or non-guideline source. Never the brand accent — it means "verify," not "brand."

2.1 Token mapping, light → dark

TOKEN	LIGHT	DARK	ROLE
--ground	#F0F5FA	#0D2440	Page canvas
--surface	#FFFFFF	#122b49	Card face
--ink	#0D2440	#E7F0FA	Primary text
--ink-dim	#2E5E99	#7BA4D0	Secondary text
--accent	#2E5E99	#2E5E99	Primary action
--accent-bright	#2E5E99	#7BA4D0	Glow / highlight

3

PLATE 3

TYPE

An engraved serif for authority, a humanist sans for reading, and a monospace for anything that must line up exactly — page numbers, hex codes, chunk IDs.

3.1

Display — Cinzel

ADRENAL INSUFFICIENCY

Section numerals, plate headers, the wordmark. Set in small doses — Cinzel at body sizes reads slow, which is correct for a heading, wrong for a paragraph.

3.2

Body — Jakarta Sans

Consider adrenal crisis in people who are critically unwell.

Every paragraph, label, and button. Weights 400–800 available; use 600 for UI labels, 400 for running text.

3.3

Data — JetBrains
Mono

nice_ng243_p09_c03

Chunk IDs, hex values, scores, exit codes — anything a clinician might need to quote verbatim.

3.4

Arabic — Tajawal

قصور الغدة الكظرية

Full parity with the English UI, not a translated afterthought — see Plate 6.

3.5

Reserved — Great
Vibes

Verified evidence

One use only: the closing mark on a completed evaluation report. Never a headline face, never body text, never repeated twice on one screen.

3.6 Scale

STEP	SIZE	FACE	USE
Display	clamp(2.4–4.2rem)	Cinzel 600	Hero headline only
Plate head	1.6–2.2rem	Cinzel 600	Section titles
Body	1rem / 1.6	Jakarta 400	Paragraphs
Label	0.85rem	Jakarta 600	Buttons, tabs
Data	0.74–0.9rem	JetBrains 500	Metadata, code

4

PLATE 4

SURFACE

A single continuous canvas that elements are extruded from or sunk into — no flat cards floating on a flat page. It reads as physical, which slows a reader down just enough to take the evidence seriously.

4.1 Extruded

Raised off the canvas. Evidence cards, the hero exhibit, this card itself.

4.2 Sunken

Pressed into the canvas. Search inputs, filter tracks, counters.

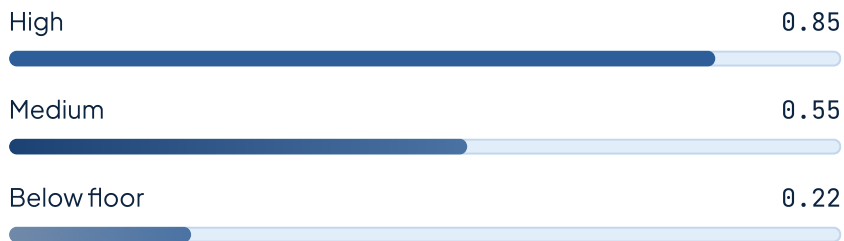

4.3 Buttons

Secondary

Primary

4.4 Confidence meter

The same three-step gauge that scores a retrieved chunk also scores everything in Plate 5 — one visual grammar for "how much should you trust this."

5

PLATE 5

VOICE

Write like the source, not like a chatbot. State what the guideline says, where it says it, and stop — the reader is a clinician who will check the citation anyway.

DO • 1.00

"NICE NG243, 1.6.1: consider adrenal crisis in people who are critically unwell with low blood pressure, hyperpigmentation, or circulatory collapse."

CAUTION • 0.6

Summarising more than one recommendation in a sentence — fine for an overview, but keep each claim traceable to its own section number.

BELOW FLOOR • 0.0

"Adrenal crisis usually presents with..." with no citation. If it isn't attributed, it doesn't ship — this is the one rule the whole system exists to enforce.

5.1 Mandatory disclaimer, verbatim

Decision-support aid for qualified clinical users. Answers are drawn only from the ingested official guidelines shown. This is not a diagnostic tool and must not be used for emergency medical decisions.

Appears on every screen and every API response that returns clinical content. Not paraphrased, not shortened.

6

PLATE 6

BILINGUAL

English and Arabic are two first-class layouts, not one layout with a translated string table. Mirror the grid, swap the display face, keep the palette identical.

ENGLISH • LTR • JAKARTA SANS

Search the guideline for a
clinical question.

RTL • TAJAWAL • العربية

ابحث في الدليل الإرشادي عن
سؤال سريري.

6.1 Mirroring rules

DO

Flip the entire grid, icon directionality, and score-gauge fill direction under `dir="rtl"`.

DON'T

Flip page numbers, hex codes, or chunk IDs — numerals and identifiers stay LTR inside an RTL sentence.

7
